If directly turning off the car power supply when the rearview mirror is working, so when the car drives again the rearview mirror will automatically work; If directly turning off its power supply, then next time you need to open it again.

Brightness adjustment

Continuously Press“  ” Power button to switch bright mode, standard mode,gentle mode and off screen mode button twice.

Function description

Stream-media rearview

Using radio and television transmission technology, the road condition behind the car is captured by high-definition camera, and then transmitted to the screen of electronic rearview mirror without delay in streaming media format.

Mirror view

Function description

- Visual field enlargement is equivalent to three times of the traditional rear view mirror. It solves the problem of rear passenger/rear window/C pillar line of sight occlusion and eliminates blind area.
- Customized glass lens, super penetration, anti-rain&anti-fog.
- Image distortion correction, real object distance, eliminate the distortion of the images.
- The image environment is not limited to daytime driving with good light, but also provides clear road pictures at night.

Function description

Reversing image

When the car is in reverse gear, the back view priority at any interface, even the start-up interface;when the car is in other gear(not reverse), the back view image will automatically exit and enter the Stream- media rearview interface.

Rear view(With Trigger)
